Custom built and
configured in USA

The Rabbit™: The First Anywhere Outdoor Cam™

Solar- and Battery-Powered, Cellular Outdoor Covert PTZ Pole Camera System

Runs weeks on battery • Review hours in minutes • Works anywhere there's cell service — for police, law enforcement agencies, private investigators, construction contractors, utilities, public resource managers, military desert environments

Ultra-low power: only ~1/10 power of ordinary pole cams, *runs weeks instead of days* on external battery, or with a compact solar power system

Anywhere deployment: pole, vehicle, concealed on ground, *horizontal or vertical*, anywhere there's cell service, no AC hookup required

Time-saving dual internal recording: continuous 1920x1080 HD video and forensic time-lapse (hour files: 1 frame every 3 sec for pedestrians; day files: 1 frame every 5 min for vandalism/objects/progress) → *review an hour or a day in one minute over the air with normal cell service*

Long-range clarity: 10x optical zoom, detail sharp enough for you to read license plates at 450 ft, with scratch-resistant glass window, not plastic

Integrated system: live video, HD normal video recording, time-lapse video recording, true pan-tilt-zoom, cell modem – all built in

Dual access: simple browser interface for investigators, and ONVIF / VMS integration for enterprise systems

Small: 4" dia. x 9" high including low profile antennas, only 4 pounds

Rapid deployment: fully configured, live in minutes

The Rabbit™

attached to the top
end of a 3.5" dia.
portable basketball
pole (not included).
